MCHD LAUNCHES SMARTPHONE MOBILE APP
MORGANTOWN, WV – DECEMBER 9, 2016

Monongalia County Health Department (MCHD) announced today the official launching of its new Smartphone Mobile App. The app is the latest edition to the health departments public information platform and is designed to make it easier for mobile users to access information from the health department. One important feature of the app gives the health department the ability to send important or emergency health department messages directly to smartphone users who have downloaded the app.

Dr. Lee B. Smith, Executive Director and County Health Officer for the MCHD said “Monongalia County Health Department serves a diverse and challenging population. In an attempt to stay current and utilize today’s technology we have adopted a Smartphone application or App that will allow us to give out health warnings when necessary, make the population aware of the availability of vaccination, inform people about all the services we provide including pricing and how to schedule. In the near future, we hope to have the ability to schedule an appointment or service by using this app. This is an essential communication device and is as important as our webpage or any of our social media accounts.”

The app can found in the Apple App Store and Google Play. Download buttons for the app have been posted on the MCHD homepage at WWW.MONCHD.ORG
